

Riverside Primary School - Science

Topic: Properties and changes of materials

Year: 5

Strand: Chemistry

What should I already know?

- A variety of everyday materials including wood, plastic, glass, metal, water and rock.
- The physical **properties** of a variety of everyday **materials** (including those that are **transparent**) and to compare and group **materials** on the basis of these **properties**
- How materials are suitably used based on their **properties**.
- How **magnets** and **electrical circuits** work.
- Some materials which are **magnetic**.
- How shapes of solid objects can be changed by squashing, bending, twisting and stretching.
- **Materials** that are **solids**, **liquids** and **gases** and their **particle** structure.
- Some **materials** change **state** when they are heated or cooled and the **temperature** at which this happens.
- The roles of **melting**, **evaporation** and **condensation** in the **water cycle** and the role **temperature** has on the **rate** of **evaporation**.
- Some rocks are **permeable**.

What will I know by the end of the unit?

<p>How to group materials based on their properties using more complex vocabulary.</p>	 magnetic  transparent  flexible
<p>What are thermal insulators and conductors?</p>	 permeable  soluble  insoluble
<p>What are electrical insulators and conductors?</p>	<ul style="list-style-type: none"> • Materials which are good thermal conductors allow heat to move through them easily. • Thermal conductors are used to make items that require heat to travel through them easily, such as a saucepan which requires heat to travel through to cook food. • Thermal insulators do not let heat travel through them easily. • Examples of thermal insulators include woollen clothes and flasks for hot drinks.  thermal insulator  thermal conductor
<p>What is dissolving?</p>	<ul style="list-style-type: none"> • Electrical conductors allow electricity to pass through them easily while electrical insulators do not. • Electrical insulators have a high resistance which means that it is hard for electricity to pass through these objects.  electrical insulator  electrical conductor
<p>Can materials be separated after they have been mixed?</p>	<ul style="list-style-type: none"> • When the particles of a solid mix with the particles of a liquid, this is called dissolving. • The result is a solution. • Materials that dissolve are soluble. • Materials that do not dissolve are insoluble.  dissolving  solution  soluble  insoluble

Vocabulary

circuit	a complete route which an electric current can flow around
condensation	small drops of water which form when water vapour or steam touches a cold surface, such as a window
conductor	a substance that heat or electricity can pass through or along
dissolves	when a substance is mixed with a liquid and the substance disappears
electricity	a form of energy that can be carried by wires and in used for heating and lighting, and to provide power for devices
evaporation	to turn from liquid into gas; pass away in the form of vapour.
filtering	a device used to remove dirt or other solids from liquids or gases . A filter can be made of paper, charcoal, or other material with tiny holes in it.
flexible	an object or material can be bent easily without breaking
gas	a form of matter that is neither liquid nor solid . A gas rapidly spreads out when it is warmed and contracts when it is cooled.
insoluble	impossible to dissolve , esp. in a given liquid .
insulator	a non-conductor of electricity or heat
irreversible	impossible to reverse, turn back, or change.
liquid	in a form that flows easily and is neither a solid nor a gas .
magnetic	having to do with magnets and the way they work
melting	to change from a solid to a liquid state through heat or pressure
particles	a tiny amount or small piece
permeable	of a substance, being such that gas or liquid can pass through it
process	a series of actions used to produce something or reach a goal.
properties	the ways in which an object behaves
rate	the speed with which something happens
resistance	the opposing power of one force against another.
reversible	able to turn or change back
solid	having a firm shape or form that can be measured in length, width, and height; not like a liquid or a gas
soluble	able to be dissolved .
solution	a mixture that contains two or more substances combined evenly
state	the structure or condition of something
temperature	a measure of how hot or cold something is
thermal	relating to or caused by heat or by changes in temperature
transparent	If an object is transparent , you can see through it
variable	something that can change or that has no fixed value
water cycle	the process by which water on the earth evaporates, then condenses in the atmosphere, and then returns to earth in the form of precipitation.

Investigate!

- Find the best material to stop an ice cube from melting. Remember to keep it a fair test by using the same number of ice cubes, or same size and thickness material.
- Place the same amount of a hot liquid in a **thermal insulator** and **conductor**. Measure the temperature over time and plot these on the same line graph. Use the line graph to ask and answer questions.
- Find out if **thermal conductors** also make good **electrical conductors**.
- Explain the difference between **dissolving** and **melting**.
- Investigate which **materials** are **soluble** and **insoluble**.
- Design an experiment that investigates **dissolving** - consider which **variables** you could change including: size of beaker, amount of **liquid**, number of stirs, size of **solid**, **temperature** of **solid** (remember that for a fair test all other **variables** must remain the same).
- Create a variety of mixtures using materials such as salt, sand, water, paper clips and rice and use a variety of methods to separate them.
- Observe and compare the changes that take place when cakes are baked or bicarbonate of soda mixes with vinegar.

Topic: Properties and changes of materials

Year: 5

Strand: Chemistry

Question 1: Thermal insulators...(tick two)	Start of unit:	End of unit:
do not allow heat to pass through easily		
allow heat to pass through easily		
keep heat contained and keep things warm		
do not keep heat contained and allow things to cool		

Q2: Examples of electrical conductors are....(tick all that apply)	Start of unit:	End of unit:
copper		
plastic		
wood		
iron		
rubber		

Question 3: Materials that dissolve are:	Start of unit:	End of unit:
insoluble		
soluble		
a solution		

Question 4: When solid particles mix with the particles of a liquid, this is called...	Start of unit:	End of unit:
evaporation		
filtering		
dissolving		
sieving		

Question 5: A synonym for the word 'permeable' is...	Start of unit:	End of unit:
waterproof		
absorbent		
magnetic		
transparent		

Question 6: Match these changes to the scientific name for the process.	Start of unit:	End of unit:
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 150px;">ice turns to water</div> <div style="border: 1px solid black; padding: 5px; width: 150px;">condensation</div> </div>		
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 150px;">water turns to water vapour</div> <div style="border: 1px solid black; padding: 5px; width: 150px;">evaporation</div> </div>		
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 150px;">water vapour turns to water</div> <div style="border: 1px solid black; padding: 5px; width: 150px;">melting</div> </div>		

Question 7: Describe an efficient way of separating paper clips from rice and explain why you chose this method.	Start of unit:	End of unit:

Question 8: You conduct an experiment to investigate if some solids dissolve quicker than others. Name one thing you will do to make the test fair.	Start of unit:	End of unit:

Question 9: Match these mixtures to the most efficient methods of separation.	Start of unit:	End of unit:
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 100px;">salt and water</div> <div style="border: 1px solid black; padding: 5px; width: 100px;">filtering</div> </div>		
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 100px;">rice and water</div> <div style="border: 1px solid black; padding: 5px; width: 100px;">sieving</div> </div>		
<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid black; padding: 5px; width: 100px;">sand and water</div> <div style="border: 1px solid black; padding: 5px; width: 100px;">evaporating</div> </div>		

Question 10: Write an 'R' or an 'I' to indicate if these are examples of reversible or irreversible changes.	Start of unit:	End of unit:
frying an egg		
mixing paper clips and sand		
mixing sugar and water		
baking a cake		
mixing flour and water		
mixing coins and flour		
mixing bicarbonate of soda and vinegar		
mixing oil and water
